Download Composer   Latest: v2.6.5

Windows Installer

The installer - which requires that you have PHP already installed - will download Composer for you and set up your PATH environment variable so you can simply call `composer` from any directory.

Download and run Composer-Setup.exe (/Composer-Setup.exe) - it will install the latest composer version whenever it is executed.

Command-line installation

To quickly install Composer in the current directory, run the following script in your terminal. To automate the installation, use the guide on installing Composer programmatically (/doc/faqs/how-to-install-composer-programmatically.md).

```
php -r "copy('https://getcomposer.org/installer', 'composer-setup.php');"
php -r "if (hash_file('sha384', 'composer-setup.php') === 'e21205b207c3ff031906575712eda
php composer-setup.php
php -r "unlink('composer-setup.php');"
```

This installer script will simply check some `php.ini` settings, warn you if they are set incorrectly, and then download the latest `composer.phar` in the current directory. The 4 lines above will, in order:

- Download the installer to the current directory
- Verify the installer SHA-384, which you can also cross-check here (https://composer.github.io /pubkeys.html)
- Run the installer
- Remove the installer

Most likely, you want to put the `composer.phar` into a directory on your PATH, so you can simply call `composer` from any directory (*Global install*), using for example:

```
sudo mv composer.phar /usr/local/bin/composer
```

For details, see the instructions on how to install Composer globally (/doc/00-intro.md#globally).

> **WARNING:** Please do not redistribute the install code. It will change with every version of the installer. Instead, please link to this page or check how to install Composer programmatically (/doc/faqs/how-to-install-composer-programmatically.md).

Notable Installer Options

--install-dir

You can install composer to a specific directory by using the `--install-dir` option and providing a target directory. Example:

```
php composer-setup.php --install-dir=bin
```

--filename

You can specify the filename (default: `composer.phar`) using the `--filename` option. Example:

```
php composer-setup.php --filename=composer
```

--version

You can install composer to a specific release by using the `--version` option and providing a target release. Example:

```
php composer-setup.php --version=1.0.0-alpha8
```

--preview, --snapshot, --1 (EOL), --2, --2.2 (LTS)

Select a specific version channel instead of the default latest stable. See "Download channels" below for more details. Example:

```
php composer-setup.php --2.2
```

--help

The installer provides more options for specific environments, use the `--help` option to see all of them.

Download channels

By default the installer and `composer self-update` will download the latest stable version only. You may select a different download channel though.
If you would like to help test pre-release versions you can use the `--preview` flag on either the installer or self-update.
For snapshot builds, which are done from the latest Composer commit, you can use the `--snapshot` flag.
To programmatically install specific major versions you can use the `--1` or `--2` flag. To select the latest 2.2 LTS you can use `--2.2`.
